

Scope 3 emissions reporting

We supply more than 10,000 food and drink products sourced from our supply partners globally to meet the demands of our customers. Whether they are ambient, fresh, frozen or chilled, each will generate different levels of carbon emissions depending on the origin of ingredients, farming and production methods involved, the energy taken to manufacture them or the methods used to transport them.

The sheer volume of products we buy drives significant emissions and collectively makes up the majority of our baseline carbon footprint. In fact, Scope 3 emissions account for over 97% of our total emissions.

As part of our ongoing carbon reporting, and following the recent completion of our FY2024 baseline and FY2025 inventory calculation, we measure and report emissions across all Scope 3 categories applicable to our operations. These include Purchased Goods and Services, Capital Goods, Fuel- and Energy-Related Activities, Upstream Transportation and Distribution, Waste Generated in Operations, Business Travel, Employee Commuting, and Investments. Please find reporting for all of these categories below.
